

1. What is your name?

Brock Francom

2. Write a paragraph that explains why the sampling method employed by Ferguson (see Item #4C from Meeting #26's agenda) is not random whereas the sampling method employed by T.J. (see Item #4D from Meeting #26's agenda) is random.

When Ferguson selected the number 12 to be his first number, that was not random. It could have been his favorite number. Then every other number had no chance of being picked. On the other hand, by mixing up the numbers and then randomly selecting the "seed" number, it was random because all numbers could have been selected to start.

4. Smile.
